Dear Mary

CHORUS BEST PRACTICE DOCUMENT - INSTALLATIONS OF UFB INTO HERITAGE BUILDINGS

Thank you for the opportunity to be involved in the preparation of the best practice guide for installing ultra-fast broadband into heritage buildings.

We appreciate the time you have taken to consult with Heritage New Zealand on best practice to avoid damage to heritage fabric or values. You have also been very receptive to the suggestions of our conservation architects on the best way of presenting the information for planners and installers.

The end result is an informative and useful document. As we have discussed, our regional conservation architects are always available to assist installers with any installations on heritage buildings that may be more difficult or complex than the guidelines can cover. Do not hesitate to call us if one-off situations require specialist input.

Yours sincerely

Barbara Rouse
Senior Heritage Policy Advisor
